DETAILED ACTION

Response to Amendment

The examiner acknowledges the amending of claims 1, 4, and 7-9, as well as the cancellation of claim 5.

Allowable Subject Matter

Claims 1-4, and 6-12 are allowed.

The following is an examiner's statement of reasons for allowance:

In addition to the reasons for indicating claim 5 as allowable previously (see Office Action, 04252006), the following reasons are also presented.

Many gas lasers are found to be controlled on some level via a magnetic field. For instance, US 4604752 teaches a single discharge section with an applied field used to control the mode profile. US 4755999 teaches a single discharge section (plural electrodes in the same tube region constitute a single discharge section to one of ordinary skill in the art) wherein the direction of the magnetic field is taught be varied (col.15 lines 50-61). This variance is not taught to have a particular benefit to the system, and is further believed to teach away from the usage as instabilities are taught to arise in this configuration. Other references such as US 3521193 and 4974228 are found to teach a plurality of field directions or polarities in a single discharge section, but without clear motivation as to why one would be motivated to utilize oppositely directed fields in multiple discharge sections. Finally, US 3681710 teaches opposed fields near to an electric discharge section, but not applied to the section itself. In the end, no reference, or combination of references, was found to teach a clear motivation to have

plural electrical discharge sections, apply magnetic fields to these sections, and have the fields themselves be of opposing directions in order to control a lateral mode profile.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
